1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 44 and 53-72 are rejected under 35 U.S.C. 102(b) as being anticipated by Rando (EP 0 327 224). Rando discloses a single substrate (10), an upper surface (11), an upper cavity (54), a beam steering assembly (14,19), a steerable element (19), an a primary optical path (17).

3. Claims 45, 46, 47, 51 and 52 are rejected under 35 U.S.C. 102(b) as being anticipated by Sano et al (EP 0379 732). Figs. 21 and 23 show a steerable element (11) is positioned substantially adjacent to a cavity. Figs. 19, 20 and 22 show a steerable element is positioned within a cavity. Fig. 24 show a groove can be formed at the bottom of a substrate (5)

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 47-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rando ('224) in view of Han et al. It is well known in the art to form a V-groove on a substrate for holding an optical waveguide so that the waveguide can be easily positioned at a desired location (see Han et al). Therefore, it would have been obvious

to form a V-groove on the substrate In Rando device so that the waveguide in Rando can easy be positioned at a desired location.

6. Applicant's arguments with respect to claims 44-72 have been considered but are moot in view of the new ground(s) of rejection.
